RESEARCH LETTER

Prevalence and Characteristics of Virginia Hospitals Suing Patients and Garnishing Wages for Unpaid Medical Bills

An estimated 20% of US consumers had medical debt in collections in 2014.¹ Medical debt has been increasing with direct patient billing, rising insurance deductibles, and more out-of-network care being delivered, even at in-network facilities. Bills sent directly to patients may ease the unaccounted price of a hospital's services and can result in financial hardship² and avoidance of future medical care.³ Hospitals need to be paid for care delivered, but some bills are unpaid. Hospitals may negotiate, reduce, or write off payments. Some have begun adopting a range of aggressive strategies for collecting unpaid bills, including suing patients and garnishing their wages or bank savings.⁴ We examined garnishment legal actions among Virginia hospitals.

Methods | We searched 2017 Virginia court records on completed warrant-to-debt lawsuits (defined as a party suing

an individual for an unpaid debt filed by hospitals resulting to garnishment of a patient's wages. Data were collected from the General District Court Online Case Information System within the Virginia Judicial System website.⁵ We searched for civil cases categorized as "warrant in debt" and "garnishment" in each Virginia district that contained the words "hospital" or "medical center" and extracted all cases in which a medical entity was the plaintiff against an individual. Virginia was chosen because of its dated online court records and because the state covers broad mix of income, political party constituencies, and urban and rural areas. We used the American Hospital Directory to identify hospital characteristics. Public collected employer data from court records. We used parametric negative binomial model on a generalized linear model with a negative binomial response to the trial characteristics associated with the number of garnishment cases per hospital per year. Statistical were performed in R version 3.4.0 using the d package.⁶ The statistical significance level was set at using 2-sided tests.

Table 1. Characteristics of Virginia Hospitals That Did and Did Not Garnish Patients' Wages in 2017 (N = 120)^a

Characteristics	Hospitals That Garnish Wages (n = 48)	Hospitals That Do Not Garnish Wages (n = 72)
Type of hospital, No. (%)		
Nongovernment	34 (71)	46 (63)
For-profit	11 (23)	26 (36)
Government-owned	1 (2)	13 (17)
Location, No. (%) ^b		
Urban	36 (75)	79 (107)
Rural	12 (25)	8 (10)
No. of beds		
Mean (SD) (range)	208 (171.11-292)	143 (111.19-194)
Median (IQR)	183 (89-247)	98 (58-134)
Annual admissions, No.		
Mean (SD) (range)	8331 (8232-21,372)	5614 (4970-23,443)
Median (IQR)	6334 (2024-11,804)	1619 (813-6454)
Annual gross revenue in millions, \$		
Mean (SD) (range)	806 (194.1-24,576)	548 (193.1-14,518)
Median (IQR)	340 (203-961)	98 (13-1,040)
General price reduction, %		
Mean (SD) (range)	482 (207.1-222-1138)	331 (149-649-974)
Median (IQR)	472 (244-576)	291 (171-444)
% of garnishments		
Mean (SD) (range)	82 (150.1-1,194)	
Median (IQR)	112 (29-310)	
Annual percentage per patient, \$		
Mean (SD) (range)	2783 (1806-21,210,000)	
Median (IQR)	1506 (701-3030)

December 2018

A Snapshot of Evictions in North Carolina

By SYDNEY IDZKOWSKI, Budget & Tax Center Research Assistant

Eviction, and the displacement that follows, is a very harsh reality for many North Carolina residents. With ever increasing rent prices, the inadequacy of investment in affordable housing programs, compounded by the loss of affordable units because of expiring subsidies and stagnant wages, leaves many North Carolina families struggling to make rent payments. Indeed, nearly half of all renters in North Carolina are pay more than 30 percent of their incomes toward housing.¹ Paying more than 30 percent of household income toward housing is considered unsustainable and means that families often have to choose between paying rent and paying utilities, adequate food, medicine, or other necessities. There is very little leeway if an unexpected emergency arises, like a broken-down car or an illness. These factors place families at a greater risk of evictions.

As housing instability becomes a more pressing issue for housing advocates, it is increasingly important to understand the nature of evictions. This document gives an overview of statewide eviction trends, changes in evictions by county, and the social, economic, and health effects of evictions. The data presented represents the number of evictions that were filed. Even though not every eviction filed results in the tenant moving, all households that receive an eviction filing is at risk of eviction and displacement.²

MARYLAND JUDICIARY CASE SEARCH DATA

Matthew Stubenberg may be leaving his job as information technology director at Maryland Volunteer Lawyers Service later this month, but his chief accomplishment at the Baltimore nonprofit will remain for years to come: a perpetually-updating, searchable database of every criminal and civil case in the state.

In his three years at the nonprofit that provides civil legal services to low-income clients, Stubenberg has built a duplicate of the Maryland Judiciary's publicly available online case search system — but with one major improvement. The MVLS database can be dissected in ways that the state's database cannot to reveal trends — in litigation, police charges, arrests, outcome — over weeks, months and years.

The nonprofit's system has "scraped" the available online data for 25 million cases dating back to 1990 and reconfigured them in a way that allows anyone with a free account to devise searches using a coding language known as SQL. And the group, working with the Maryland

Opportunities

- we've seen more and more cases where court data can be used to shine a light on legal process problems within the courts and bad actors who are leveraging courts for personal gain
- open data movement is strong (and not going away)
- considerable interest from organizations outside of the legal world for this information
- e-filing is improving data quality

Challenges

- gathering the data today requires significant technical chops
- courts are cash strapped and making data publically accessible for secondary analysis is a low priority
- administrative data needs to be cleaned/harmonized

Office of Data Governance and Analysis goals....

Inform Policy

We gather and analyze data to make evidence-based statements about the contours justice gap.

Monitor Services

We report on the nexus of legal services and community needs.

Build Capacity

We gather and share data, build tools and provide analytic support and training to the legal aid community.

State Court Data Availability

Criteria for "Available":

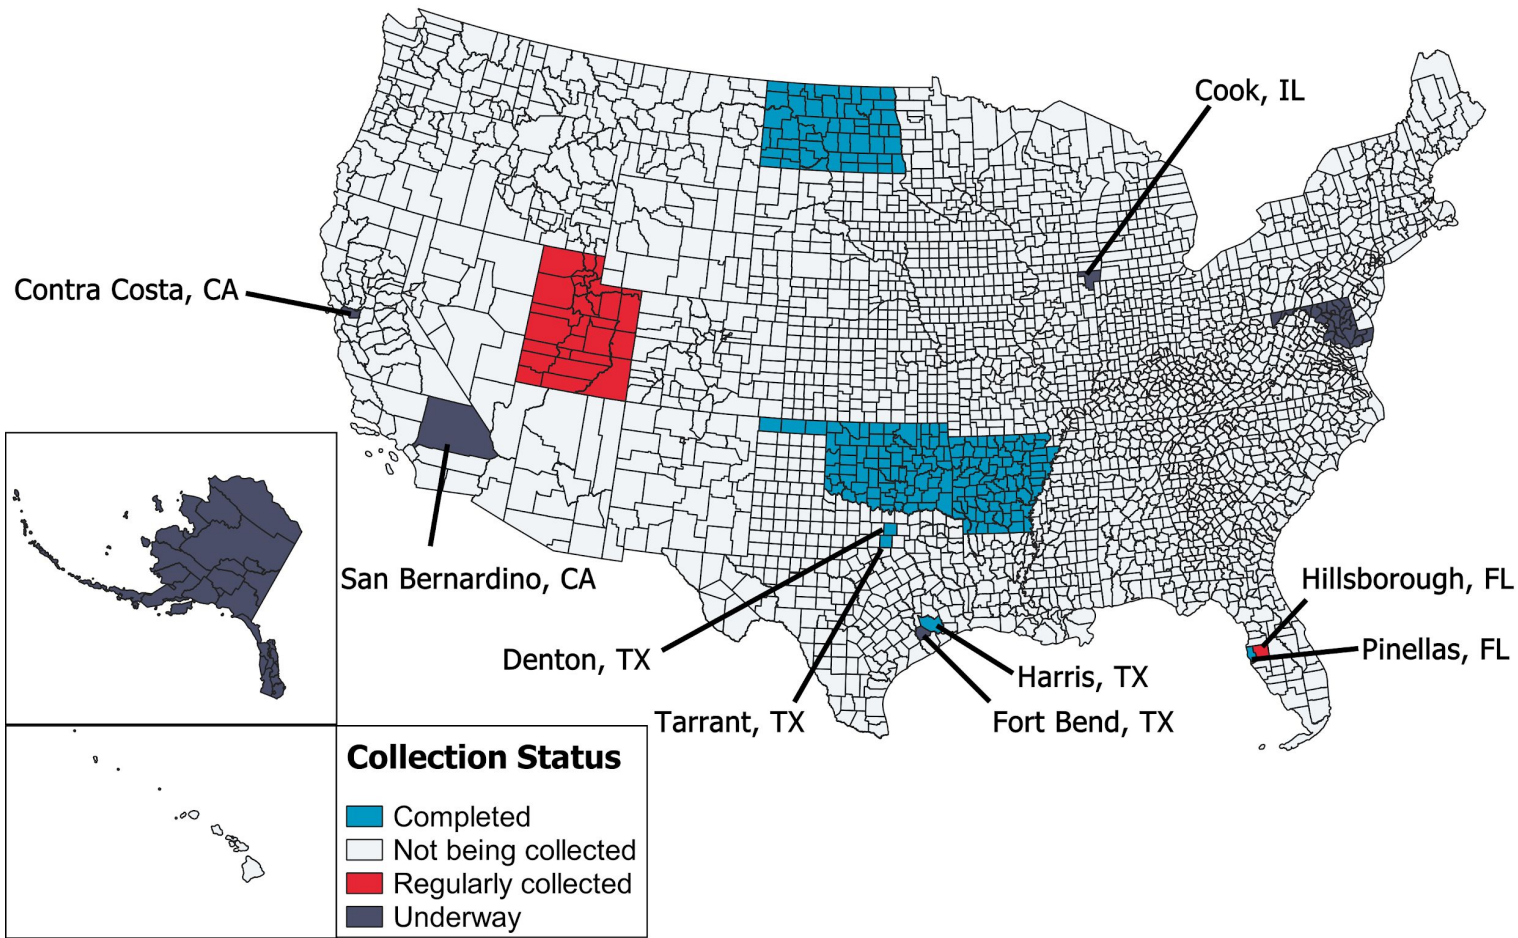

- Multi-year historical case records.
- hosted on a single state-wide website.
- not prohibited from scraping or blocked by CAPTCHA or paywall.

Availability Classification

- Available
- Unavailable: CAPTCHA
- Unavailable: Cost
- Unavailable: No website
- Unavailable: Prohibited

Data Collection Status (Jan 2020)

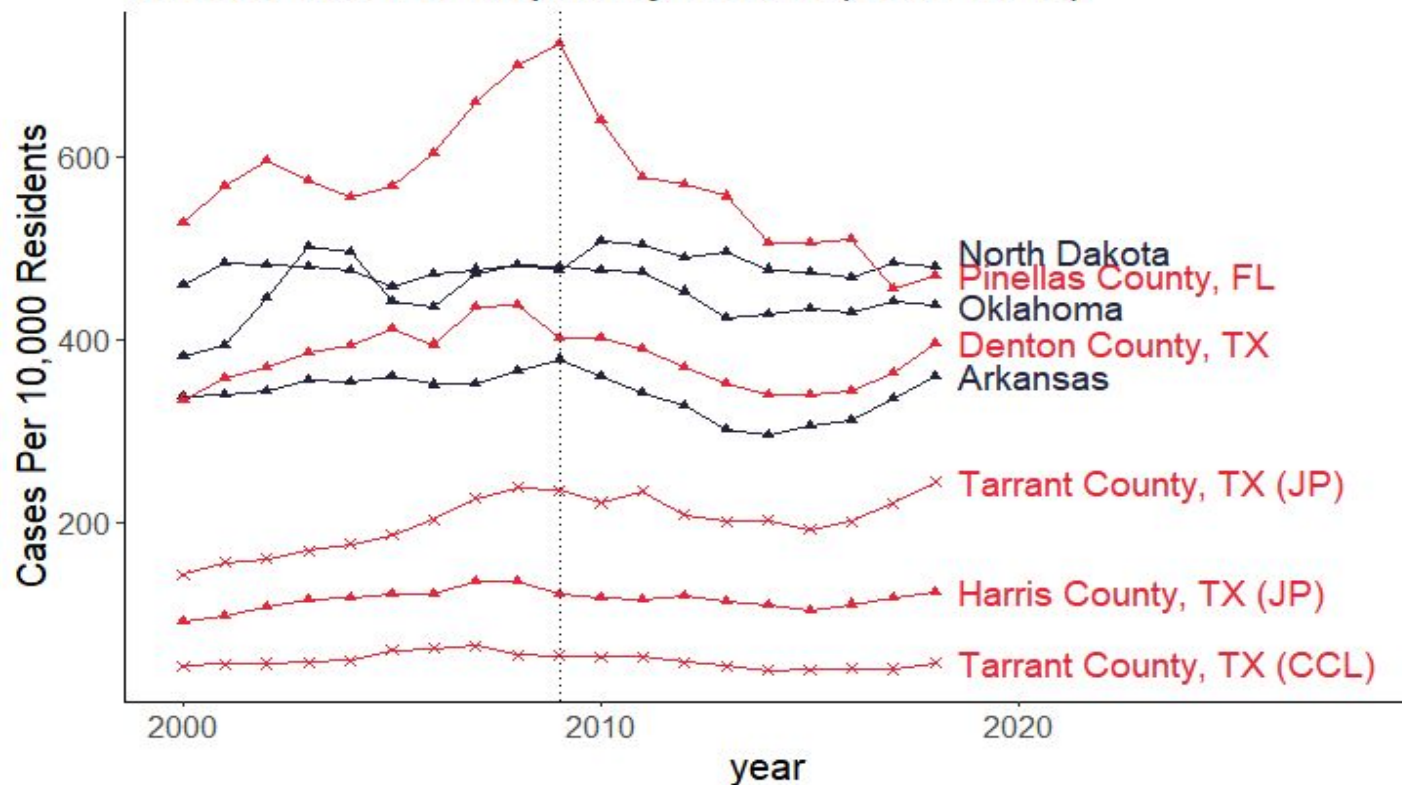

Data Quality

Cases Filed in 2018

Locale	AOC count	ODGA count	Percent Difference
Oklahoma	164234	172312	-4.9
Arkansas	105945	108351	-2.3
North Dakota	36322	36480	-0.4

Cases Filed Per Capita by Locale (2000-2018)

Party Street Address

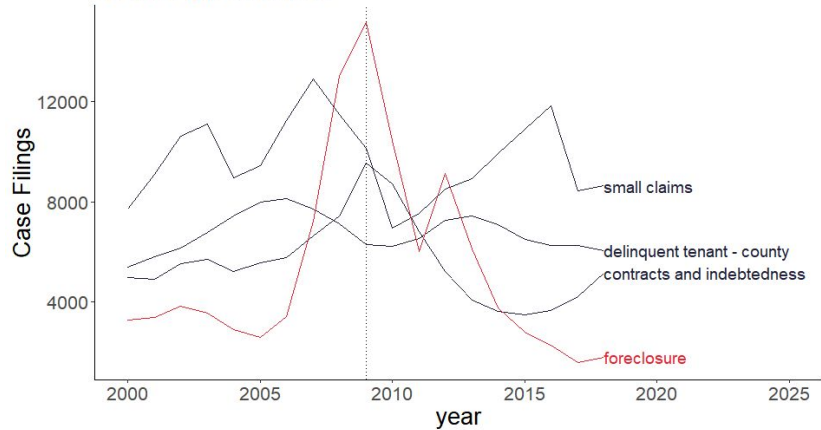

- included
- ▲ not included

Representation Information

- × affirmative pro se parties identified
- ▲ attorneys identified where applicable

Select Case Filings: Pinellas County, FL (2000-2018)

By case type and year

Capturing Court Data

The Data Gathering Process

- How did you approach the data collection?
- How long did it take?
- What roadblocks did you run into?
 - Discuss variations in data accessibility across jurisdictions

What did we learn?

- Overview/summary statements about data quality
- How comprehensive is the data (relative to AOC reports?)
- What would you do differently knowing what you know now?

Analysis and Reporting

Descriptive Overview

- [Might want to insert a map displaying counties/states where we've gathered data]
- Provide overview of docket size/change over time
 - Might want to normalize to cases per 10,000 pop at the county or state level
- Provide more detailed info about a few substantive areas (e.g. debt, evictions)

What's next?

- Gathering more data from target rich areas (areas with high poverty concentrations and more detailed court data)
- Beginning more detailed analysis on characteristics of debt, eviction and pro se cases.
